**ABSTRACTED-PUB-NO:** CA 2112754A

**BASIC-ABSTRACT:**

Use of a suitable mixt. of dimethyl sulphoxide (DMSO) and hydrogen peroxide, applied either topically or introduced by tubes, syringes, or other suitable methods to the malignant area affected, is new.

USE - The patent is written as a personal account, describing the successful self-therapy of a confirmed malignancy on the mouth while waiting for an operation to remove it. The theoretical reasoning is

that cancer cells consume CO2 and are hypoxic, with oxygen being toxic to them. The DMSO is very penetrating, and carries the oxygenating H2O2 inside the tumour, killing it and destroying the tumour wall. Accounts are also given of the treatment applied to three other patients, two with breast cancer, and the other with melanoma cancer by the eye, all apparently successful with no cancer after a week. All cases were topical, but treatment, e.g., by injection, to organs deep inside the body is visualised.

ADVANTAGE - The malignancy is cured without need for surgery, radiation, chemotherapy, or other treatment toxic also to healthy cells, without endurance of pain, or high expense. Patients can treat themselves at home without medical help, need for hospitalisation, or lost time from work.
